

## REGRESSION LINE FOR FINAL GRADE VS WORKSHOP HOURS

(VSAT = 444, MSAT = 561)

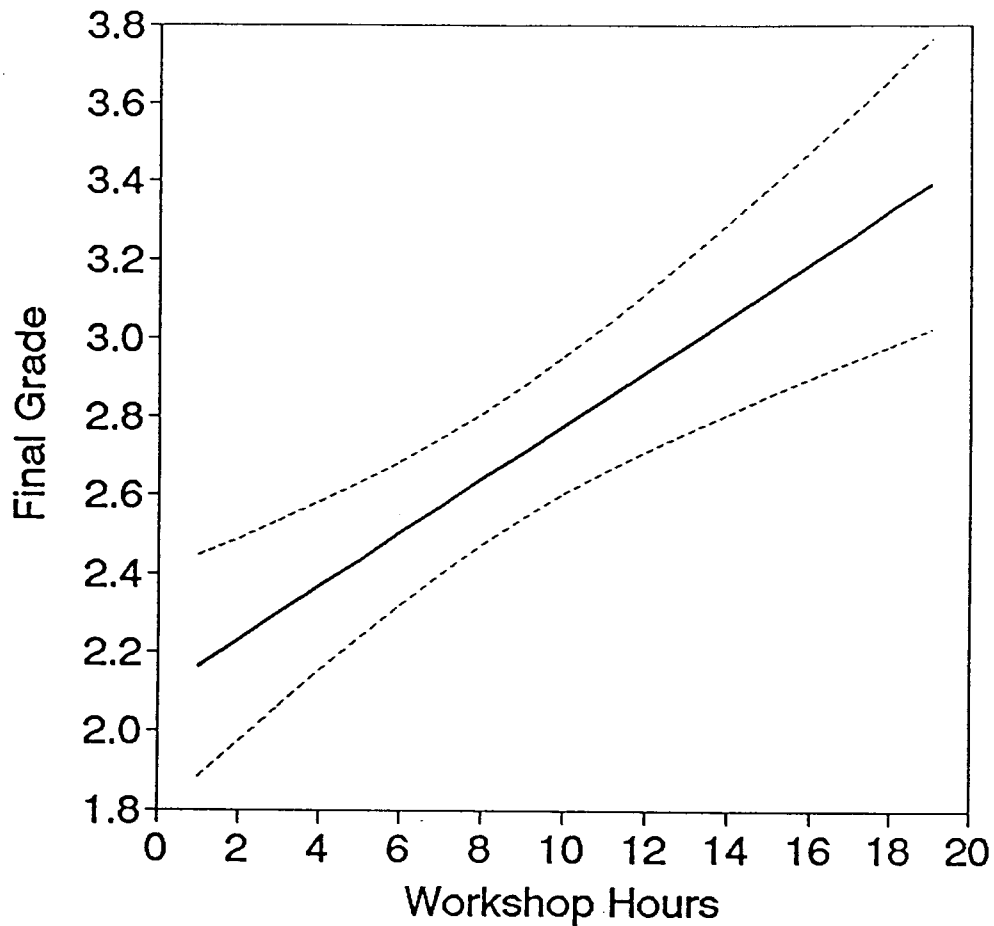

Figure1. Plot of the regression equation of final grade versus number of hours of workshop attendance ( $\text{Final Grade} = 0.473 + 0.004 (\text{MSAT}) - 0.002 (\text{VSAT}) + 0.068 \text{ Workshop Hrs.}$ ). The averages of verbal (444) and math (561) SAT scores for the studied group were entered into the equation. The solid line (—) represents the regression line and the dashed lines (-----) represent 95% confidence limits.
